

Wellspring Village

Wellspring Village provides a secured, supportive “village” environment specifically designed for the special needs of those with Alzheimer’s disease or other forms of memory limitation or dementia. Cozy apartment homes, comfortable gathering spaces, and indoor and outdoor activity areas create a stimulating yet manageable living space. This maximizes residents’ ability to be independent and increases opportunities for social interaction.

Gentle, Respectful Care

Residents are esteemed for the unique individuals they are; deserving respectful and dignified care. By concentrating on what residents *can* do rather than what they *cannot* do, Wellspring Village offers the perfect blend of supportive services and encouragement toward as much self-sufficiency as possible. This helps residents feel a sense of purpose in their environment and fosters feelings of well being and belonging.

Enriching Activities

By promoting familiar skills used in everyday life, the innovative Wellspring Village program of care and activities encourages feelings of productivity and satisfaction. Wellspring residents engage in activities that involve music, pets, art, aromatherapies, trips, cooking, gardening, and exercise.

Highly Trained Staff

Thoroughly trained Wellspring Village caregivers specialize in a positive-reinforcement style of care that minimizes residents’ stress and promotes calmness. Staff is available 24 hours a day and residents enjoy personal attention and interaction.

Family Support

Wellspring Village also offers support and education aimed at helping family members gain an understanding of what’s happening to their loved one, as well as, the impact on the family. Resident families and staff work together to forward the care process.
